## Estimating Bracelets

Bob and Kate are making bracelets to sell at a craft fair. Each bracelet uses 6 blue beads, 9 silver beads, 3 rose beads, and 7 white beads. The table shows how many beads they have of each color.

- Use estimation to figure out about how many bracelets Bob and Kate can make with each color of bead.
- Then tell if each answer is an overestimate and they will not have quite enough beads or an underestimate and they will have some beads left over.

| Color | Number of <br> Beads | Number <br> Needed for <br> Each Bracelet | About How <br> Many Bracelets <br> They Can Make | Is the Estimate <br> Over or Under? |
| :---: | :---: | :---: | :---: | :---: |
| Blue | 258 | 6 |  |  |
| Silver | 428 | 9 |  |  |
| Rose | 102 | 3 |  |  |
| White | 258 | 7 |  |  |

1. About how many bracelets can they make before they run out of beads?
$\qquad$
2. What color will they run out of first?
3. Will they run out of blue beads or white beads first?

How do you know?
